# IPIP-NEO

"The IPIP-NEO is not identical to the original NEO PI-R, but in my opinion it is close enough to serve as a good substitute. More and more people are beginning to use it in published research, so its acceptance is growing." - Dr. Johnson

Installation on Windows

1. Get and install Strawberry Perl from http://strawberryperl.com/. I usually get and run the `strawberry-perl-5.18.1.1-32bit.msi` file. At the end of this step, you will have Perl installed in c:\strawberry folder.

2. Download and extract this repository. Use https://github.com/kholia/IPIP-NEO-PI/archive/develop.zip URL.

3. Run the IPIP-NEO server by clicking on the `start-server.bat` file. After doing so, you should see something like,

4. Open the IPIP-NEO test in the browser by clicking on the `start-browser.bat` file.
